DETAILED ACTION

Response to Amendment

This action is in response to the amendment submitted on May 8, 2002.

Acknowledgement is made of new claims 13-26.

Claim Objections

Due to Applicants' amendments, the objection to claims 1, 4-5, and 10 are withdrawn.

Claim Rejections - 35 USC § 112

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office Action.

Due to Applicants' amendments, the previous rejections of claims 1-12 are withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Art Unit: 1774

Claims 1-5, 7-11, 13-15, and 20-26 are rejected under 35 U.S.C. 102(e) as being anticipated by Shetty et al., U.S. Pat. No. 5,837,359.

Shetty shows a film comprising at least one crystalline polyester coextruded layer of polyethylene terephthalate or polybutylene terephthalate and that only the outermost skin layers comprise titanium dioxide pigment (column 2, lines 12-15 and claim 1). Shetty shows that the layers comprise up to 12.5% of the pigment in the skin layers (column 3, lines 37-55). Shetty shows that the outermost skin layers are at least 5% of the total thickness of the film (ratio of thickness of 1 or more) (column 1, lines 59-67) and that the particles in the skin layers have a size of 2-15 μ m (column 2, lines 49-54).

Claim Rejections - 35 USC § 103

Due to Applicants' remarks, the previous rejection of claims 1-12 is withdrawn.

Claims 6 and 16-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shetty et al., U.S. Pat. No. 5,837,359.

Shetty is relied upon as above for claim 1. The experimental modification of prior art in order to optimize operation conditions (e.g. determine thicknesses and compositional proportions) fails to render claims patentable in the absence of unexpected results. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shetty et al., U.S. Pat. No. 5,837,359 in view of Utsumi et al., U.S. Pat. No. 5,510,192.

Shetty is relied upon as above for claims 1 and 11. Shetty does not show a step of using a master-batch as in instant claim 12. Utsumi shows a polyethylene naphthalate multilayered film comprising carbon black and titanium dioxide particles wherein a step of using a masterbatch is

performed (column 7, lines 13-18). It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a masterbatch in Shetty because it is known in the art that polyester and pigments can make a masterbatch in order to make the multilayered film structure in an efficient manner.

Response to Arguments

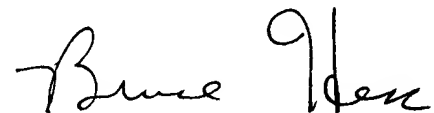

Applicants' argument filed May 8, 2002 have been fully considered but they are moot based on the new rejection.
